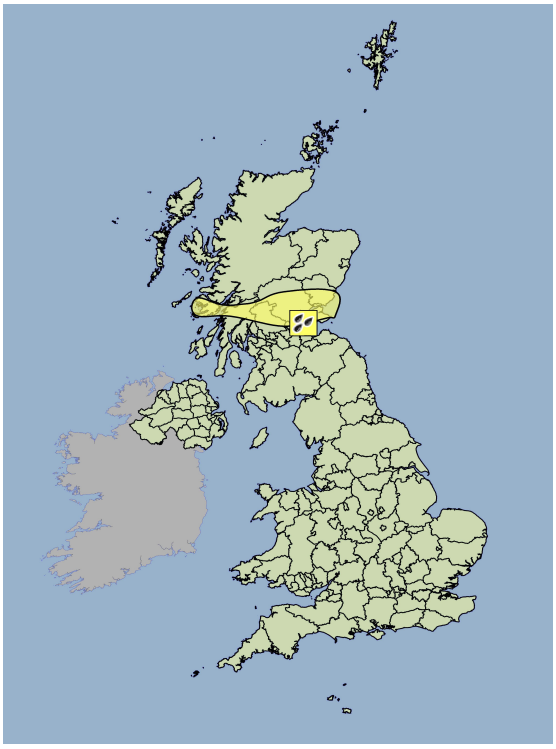
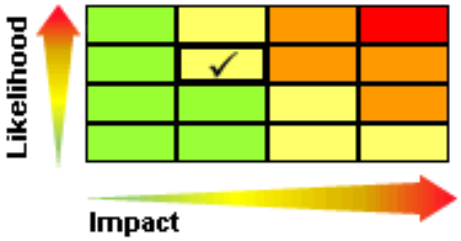
National Severe Weather Warning Service





Chief Forecasters Assessment
Warm, humid air has been pulled northwards across the UK from France and Spain. This brings an increasing likelihood of heavy, thundery rain spreading from the south through Saturday afternoon and evening. It is likely that some places within the warning area will miss the worst of the storms, but where they occur they could produce 10-15 mm rainfall in one hour and perhaps 20 mm in 3 hours.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **15:00 on Sat, 07th Jun 2014** until **21:00 on Sat, 07th Jun 2014**

A short spell of heavy rain is expected across central Scotland later on Saturday afternoon and during Saturday evening. This will move quickly northwards across the region but will be locally intense. There is also the risk of some thundery activity embedded within this.

The public should be aware of the potential for localised flooding due to the intensity of the downpours and some difficult driving conditions.
